

## Have your say

### On improving stroke services in Bristol, North Somerset and South Gloucestershire

7 June – 3 September 2021

By organising our expert care and resources into specialist units, we can give everyone the best opportunity to survive and thrive after stroke. Changes could:

- Improve survival rates by 1%, meaning 15 fewer deaths in our area each year.
- Allow more people to leave hospital sooner, meaning that each year, a further 13 people would be more independent a few months after stroke.
- Improve long term outcomes, preventing 57 people from living permanently in a care home each year.
